

FREE Leakage Report

Sample Integrated Health Delivery System

Leakage Performance

CareJourney utilizes shared patient algorithms to identify where (what practice groups or facilities) a population of patients are accumulating medical utilization. In this case, we evaluate attributed patients. The numbers in the below chart are total paid dollars.

Takeaways

The shared patient evaluation reveals ~50% out of network spend Part B from Medicare Fee-For-Service patients attributed to the organization. The largest contributing group is Stanford Health Care, followed closely by Vitreo-Retinal Medical Group.

CareJourney Recommendations

1. See provider-level referrals to determine the specific individuals sending patients to your largest leakage sources.
2. Analyze cost and quality metrics for other facilities where leakage is occurring to consider adding the highest quality groups to your network.
3. See where your competition is referring patients to maximize market share opportunities.

About CareJourney

CareJourney is a leading provider of clinically-relevant analytics for value-based networks. Headquartered in Arlington, VA, CareJourney currently supports leading payer, provider, and life sciences organizations across the US in achieving their goals by wringing new, high value insights out of expansive population claims data. Through its CareJourney Platform, CareJourney provides members with interactive dashboards of clinically-relevant insights around network design and management, care model management, patient risk segmentation, spend and utilization trends, network integrity, low-value care, and provider, practice and facility (acute and post-acute) performance.
