Headlines Reveal:

**Medicare Advantage is in a time of
change...and opportunity**

Helping you navigate the full Medicare landscape

100% MA Encounters

VBC Navigator now includes 100% MA Encounters based insights through 2022, and additional MA attribution as recent as FFS Data (2024), completing the full Medicare picture

5 Measure Categories

Full suite of MA metrics now available across five measure categories for better apples to apples comparisons with traditional Medicare FFS: patient volume, HCC score, quality, care coordination, specialty utilization

3 Granular Views

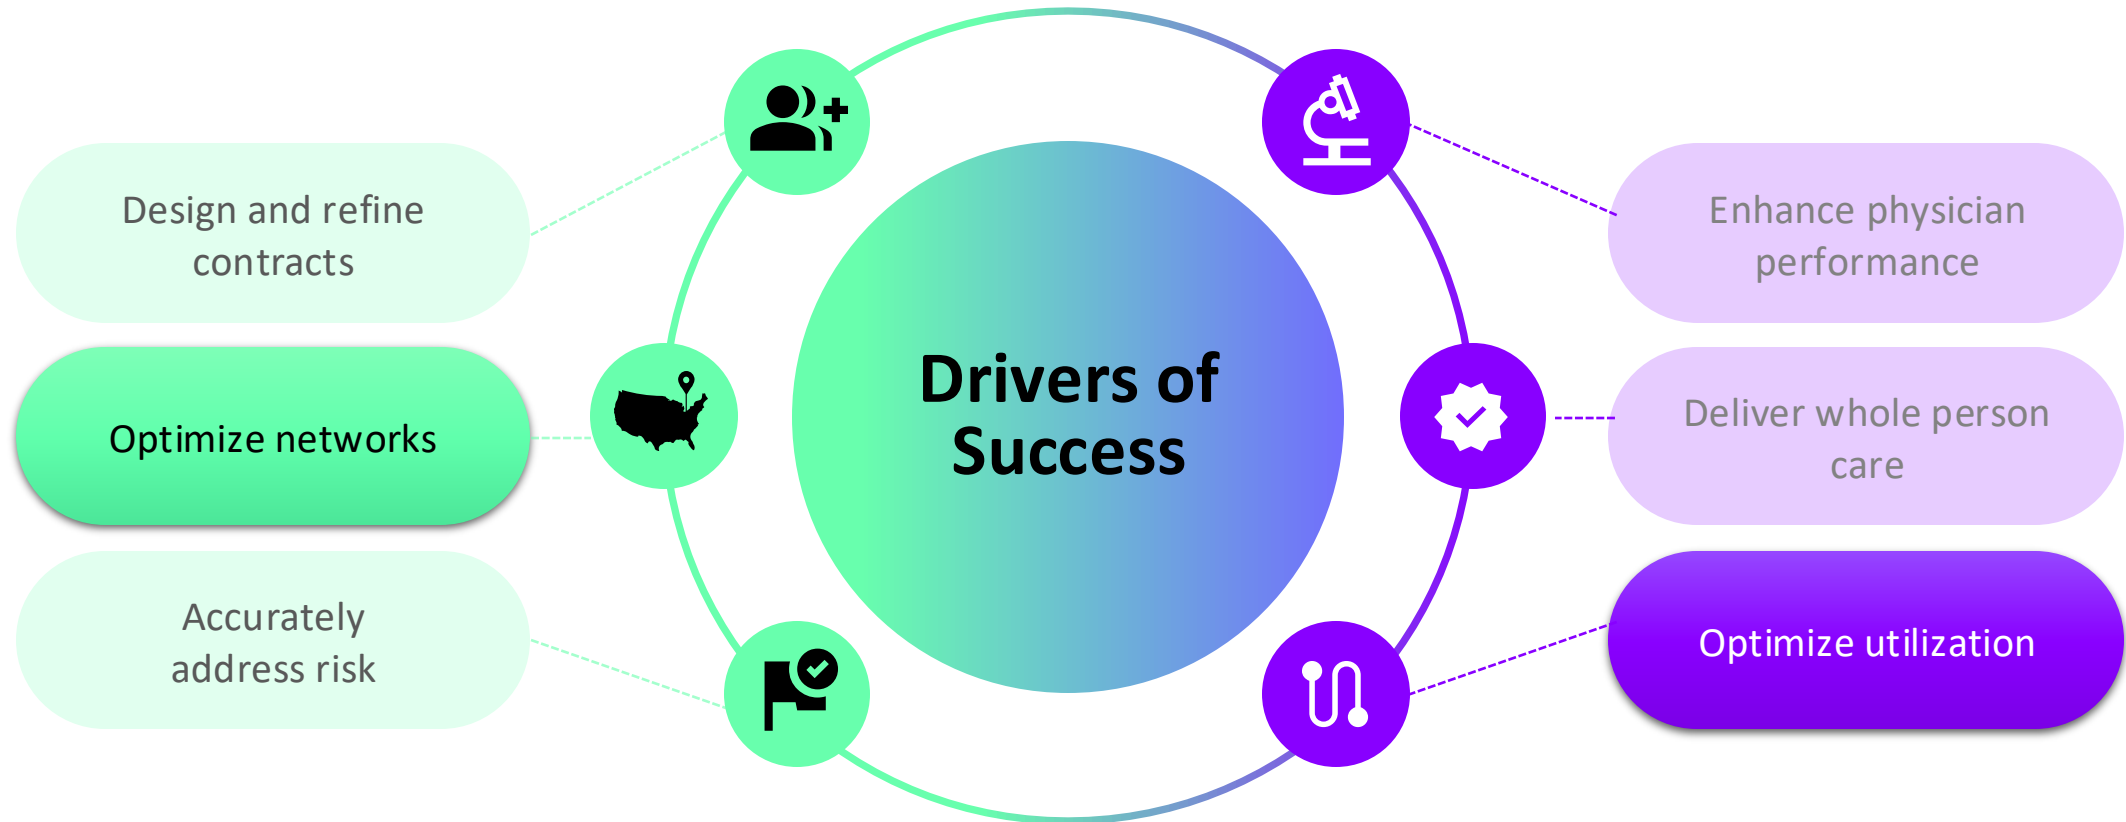

View MA data across multiple entity types to drill into specific insights based on VBC Organization (ACO), Group (TIN), or Payer.

6 New MA Reports

The MA profile is also accompanied by six new reports available both in CJ Home and via DaaS. Use these reports to run robust analytic deep dives and view even more measure data.

Orienting your strategy around proven drivers of success

FAQ about the MA profiles can be found on Community [here](#). *More Questions? Email: support@arcadiasolutions.com*

How do I access the new MA Profiles?

Take advantage of this opportunity to explore the latest updates in CareJourney Home by clicking on Risk Management module and searching for a market or entity of interest. Scroll down to the list of participants and use the drop down to select the “modeled as” population for Medicare Advantage. Click on an entity name to view their profile.

Is this data accessible to download? Do you have reports?

Yes, there are currently 6 national-level reports with full download capability available to members who have purchased the Medicare Advantage population. Reach out to Member Services to learn more about how to obtain full access and download capability.

When does my access to the MA Profiles end?

This data is only available for a limited time and access will end March 31st 2025. Reach out to Member Services to learn more about how to obtain full access and download capability.

Medicare Advantage Profiles FAQ

[Book Office Hours](#)

FAQ about the MA profiles can be found on Community [here](#). More Questions? Email: support@arcadiasolutions.com

Why are we using ACO contract-level modeling for Medicare Advantage (MA)?

We aimed to curate a grouped view of TINs nationally that is streamlined and easily accessible in the platform without the hassle of requiring manual, additional network information from our members. While there can be some variation, a majority of VBC organizations tend to have highly similar networks across Medicare Advantage and ACO participation. Adding this report to Risk Management enables our members to have a complete, seamless view of performance across the same TINs and populations.

What do the 2023 and 2024 Utilization measures represent for MA when encounter data for those years is unavailable? How should I interpret these numbers?

Since encounter data for 2023 and 2024 is unavailable, the utilization measures rely on data from previous years, particularly 2022, combined with Part D attribution for the target years (2023 and 2024).

Although the absence of encounter data for 2023 and 2024 will not fully reflect shifts in care delivery, changes in member health status, or adjustments to the plan's structure – the analysis still provides valuable insights by combining Part D attribution with 2022 data, offering a relevant baseline for forecasting future patterns. This combination allows for the identification of trends that are still relevant, even if some details are based on historical data.

Why are some measures null for the years 2023 and 2024?

Some quality measures will be null in more recent years because they require encounter data, which is only available up to 2022 right now. The measures that will be populated for more recent years are: frailty, mortality, med adherence (RAS, DIAB, STAT), ma attribution through part D, medicare cohort.

Thank You!
